

# One in three Canadian youth experiences adolescent dating violence: study

Study focused on youth in Grades 9 and 10

The study also revealed that the rates of violence are highest amongst marginalized youth, particularly those living in poverty, youth who identify as non-binary, racialized youth and new Canadian youth. The importance of equity-focused community-based prevention and interventions are key to stopping cycles of victimization. Prevention of ADV is also linked to improving health and well-being in the long term.

*Funding for HBSC data collection was provided by the Public Health Agency of Canada. The funder had no role in the study design; collection, analysis or interpretation of data; writing of the report; or the decision to submit the manuscript for publication. Dr. Exner-Cortens' work was supported in part by an Early Career Award from Alberta Health Services/PolicyWise. Dr. Baker is an Eyes High postdoctoral scholar.*

**Child Health and Wellness**

*The University of Calgary is driving science and innovation to transform the health and well-being of children and families. Led by the [Alberta Children's Hospital Research Institute](#), top scientists across the campus are partnering with Alberta Health Services, the Alberta Children's Hospital Foundation, and our community to create a better future for children through research.*

*Deinera Exner-Cortens is an assistant professor in the Department of Psychology, Faculty of Arts and the [Department of Psychiatry](#) at the [Cumming School of Medicine](#) (CSM).
