

# Working For Kids: Building Skills™

Parent & Child Volunteers Needed  
For a Research Study to test Working For Kids in Alberta

Conducted by University of Calgary researchers and  
Working For Kids: Building Skills

- Help us to evaluate a new program that teaches about how your child's brain develops through 4 one-and-a-half-hour learning sessions.
- Each learning session for parents has group activities and games you can participate in that will help you learn this information. Childcare will be provided.
- If you join this research study, in addition to the 4 learning sessions, you will be asked to complete questionnaires about you and your child's life experiences, allow collection of your child's urine samples after they use the toilet and urine is collected in a plastic holder in the toilet, have your child play games on an ipad that tell us about their cognitive development, and allow us to videotape short sessions of you playing with your child to evaluate your child's interactive skills. The child development measures will be made 3 times: at baseline, 6 months after parent learning sessions and one year after parent learning sessions.
- To evaluate your child's sleep patterns, we will ask you to complete diaries about their sleep for 3 one-week periods during the study.
- Compensation will be provided at the end of the 4 training sessions, and after each sleep diary is turned in.
