WHAT WILL I STUDY?
Undergraduate Programs - Bachelor of Nursing

Terms 1 and 2 (high school students only)
Focus is on making you comfortable with university life through foundational studies
• Take compulsory courses pivotal to your learning and to your future nursing practice (Anatomy and Physiology, English, Statistics and Philosophy) as well as some options that allow you to explore your interests

Term 3
Focus is on population health across the lifespan and in a variety of communities
• Learn about the profession of a registered nurse
• Learn how to assess, protect and promote the health of groups and communities while building your skills in personal and team communication
• Practice within the faculty and in a variety of placements including schools, community agencies and workplaces

Term 4
Focus is on developing your knowledge and skills with individuals and families across the lifespan in a variety of community settings
• Study risks and challenges to family health; common health issues confronting families; the impact of mental illness
• Be introduced to nursing research projects
• Practice within the faculty and also in a variety of placements including public health clinics, outpatient children’s clinics, mental health residential services and residential care settings

Term 5
Focus is on individuals and families with serious health challenges and life-threatening illnesses
• Learn about acute illness, injury and disease in Canada; nursing approaches to managing alterations in all body systems; management and skills associated with rapidly changing health situations; and complex communication and clinical reasoning
• Practice within the faculty and also in hospital units such as general adult medicine and surgery, pediatrics, psychiatry and cardiology

Term 6
Focus is on chronic illness in individuals and families
• Study health trends in chronic diseases in Canada; nursing approaches to management of common chronic diseases; and examine systems of care and nursing roles and practices that are effective for chronic disease management
• Practice within the faculty and also in hospital units such as general adult medicine and surgery, pediatrics, psychiatry and cardiology

Term 7
Focus is on integrating your classroom knowledge with your practice as well as working with concepts of leadership, research, policy development and ethics
• Choose two senior Nursing options in an area of particular interest to you for in-depth study and also develop additional analytical and research skills, competence and confidence in clinical decision-making and self-evaluation
• Gain a thorough understanding of health systems and health policy
• Practice within the faculty and also choose a focused area with a particular population (child/adolescent, older adult, perinatal/maternity, oncology, addictions/mental health)

Term 8
Focus is on your transition to the role of a registered nurse
• Spend the majority of this final term in an offsite practice setting working 1:1 with a registered nurse preceptor and your faculty advisor
• Expand and consolidate your nursing knowledge, skills and attitudes toward coordination of patient/family-centered care
• Participate in collaborative practice teams
